Club Pilates Studio

3D PAPER BUILDING KIT · CRICUT MAKER 4 · ASSEMBLY GUIDE

A one-of-a-kind personal gift. Not for sale. Club Pilates name and logo are trademarks of Club Pilates.

Welcome

This kit builds a miniature Club Pilates studio: a 5.5 in wide × 4 in deep × 4.5 in tall storefront (4 in walls plus a 0.5 in roof parapet) with the official logo sign, glass windows, three mini reformers, mats and balls, on an 8 × 8.6 in base with sidewalk. Every file is a single cardstock color, so you load one sheet, cut, and move on.

Kit contents

File	Cardstock	Pieces
01-white-sheet1.svg	White cardstock	walls white · 8 score lines
01-white-sheet2.svg	White cardstock	logo white, sign letters white
02-gray.svg	Gray cardstock	roof gray, frames gray · 8 score lines
03-charcoal.svg	Charcoal / black cardstock	sign board charcoal
04-blue.svg	Club Pilates blue cardstock	logo halo blue, awning blue · 1 score lines
05-pink.svg	Pink cardstock	mats balls pink
06-tan.svg	Tan / kraft cardstock	frame wood · 18 score lines
07-navy.svg	Navy cardstock	carriage navy · 12 score lines
08-green.svg	Green cardstock	base green
09-light-gray.svg	Light gray cardstock	sidewalk gray
10-vellum.svg	Vellum (or light blue)	glass blue

Also included: all-pieces.svg (reference sheet only; don't cut), PNG previews, and the walkthrough video.

Materials & tools

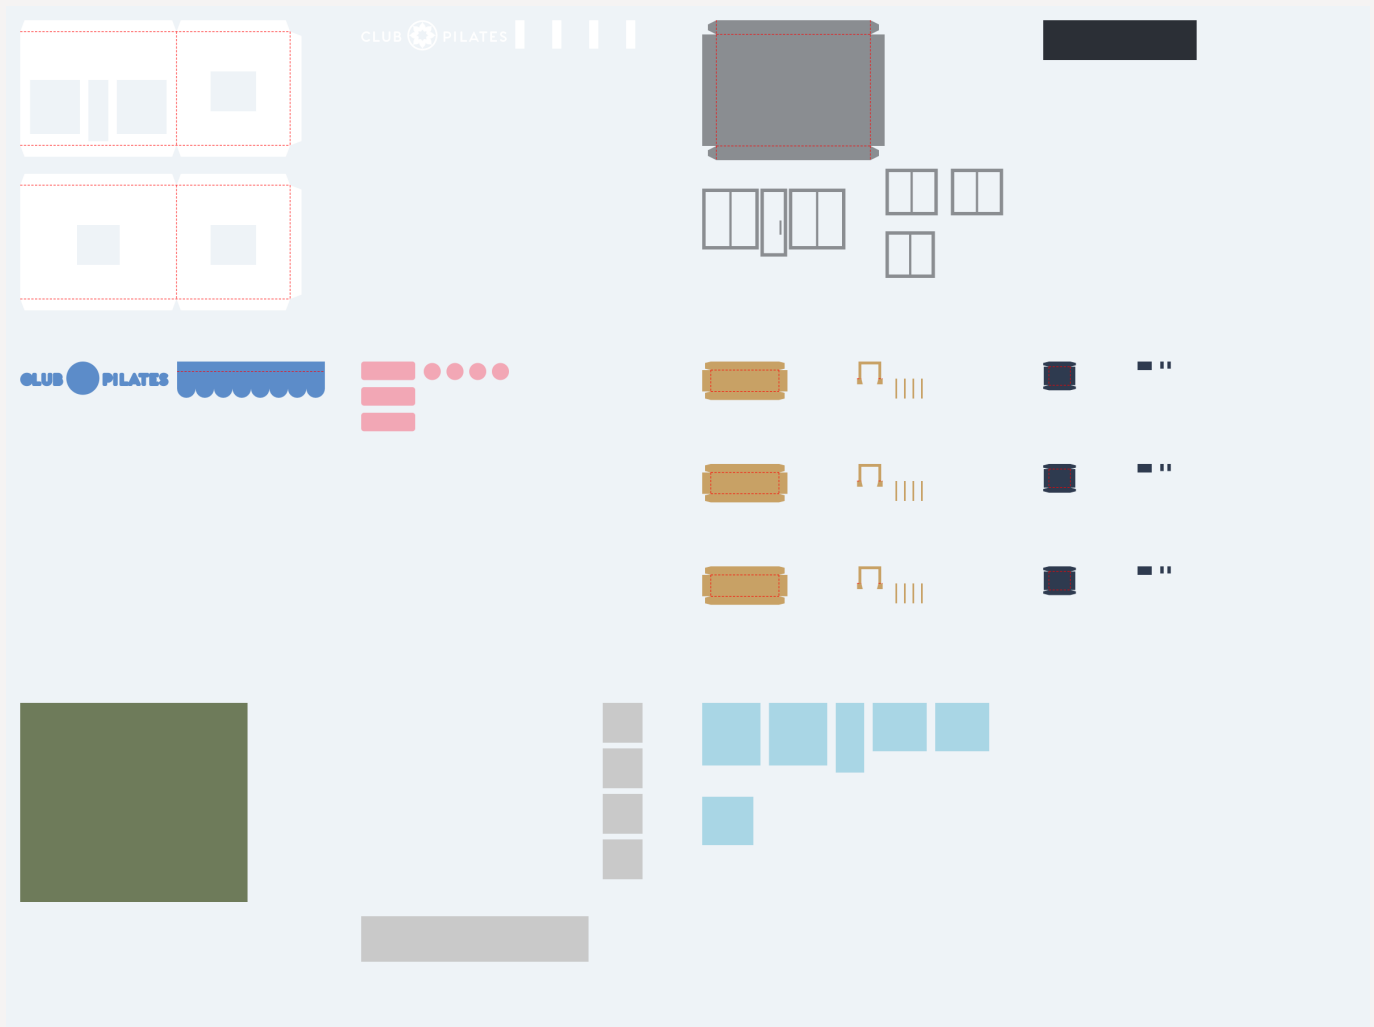

- 65–80 lb cardstock in: white, gray, charcoal/black, Club Pilates blue (~#5C8CC9), pink, tan/kraft, navy, green, light gray
- Vellum (or light-blue cardstock) for the windows
- Cricut Maker 4, StandardGrip mat, fresh fine-point blade
- Scoring wheel or scoring stylus
- Tacky glue or fine-tip glue pen, tweezers, ruler, bone folder

Design Space setup

- Upload: New Project → Upload → Upload Image → Browse → choose a color file → Upload → add to canvas. Repeat for each file.
- Check size: each file imports at its true size, shown in Cricut-Import-Steps.txt (for example 02-gray is 10.59 × 9.06 in). If it doesn't match, lock proportions and type the listed width.
- Score: select the red SCORE lines → Operation: Score (scoring wheel or stylus).
- Attach: select the SCORE layer together with the cut layer in that file → Attach, so scores land in the right place.
- Make It: On Mat → Medium Cardstock (80 lb) or Light Cardstock (65 lb); Vellum for 10-vellum. Use Intricate Cut for 01-white-sheet2 (logo) if your machine offers it.

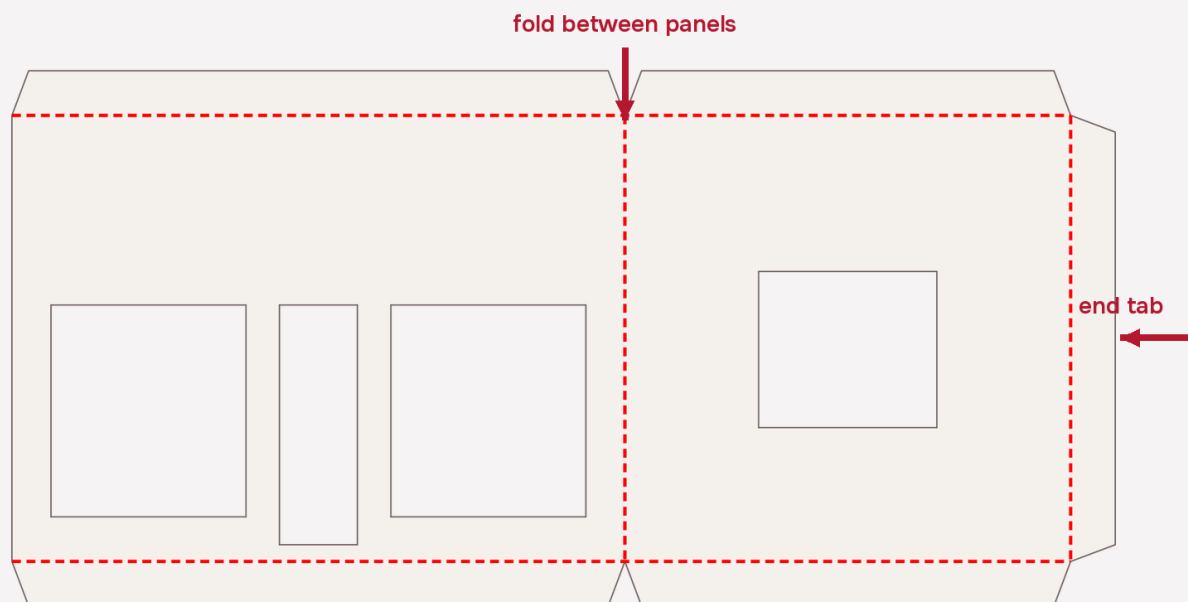

Cut order (by color)

#	Load this sheet	File	Score?
1	White cardstock	01-white-sheet1.svg	Yes – attach
2	White cardstock	01-white-sheet2.svg	–
3	Gray cardstock	02-gray.svg	Yes – attach
4	Charcoal / black cardstock	03-charcoal.svg	–
5	Club Pilates blue cardstock	04-blue.svg	Yes – attach
6	Pink cardstock	05-pink.svg	–
7	Tan / kraft cardstock	06-tan.svg	Yes – attach
8	Navy cardstock	07-navy.svg	Yes – attach
9	Green cardstock	08-green.svg	–
10	Light gray cardstock	09-light-gray.svg	–
11	Vellum (or light blue)	10-vellum.svg	–

Assembly

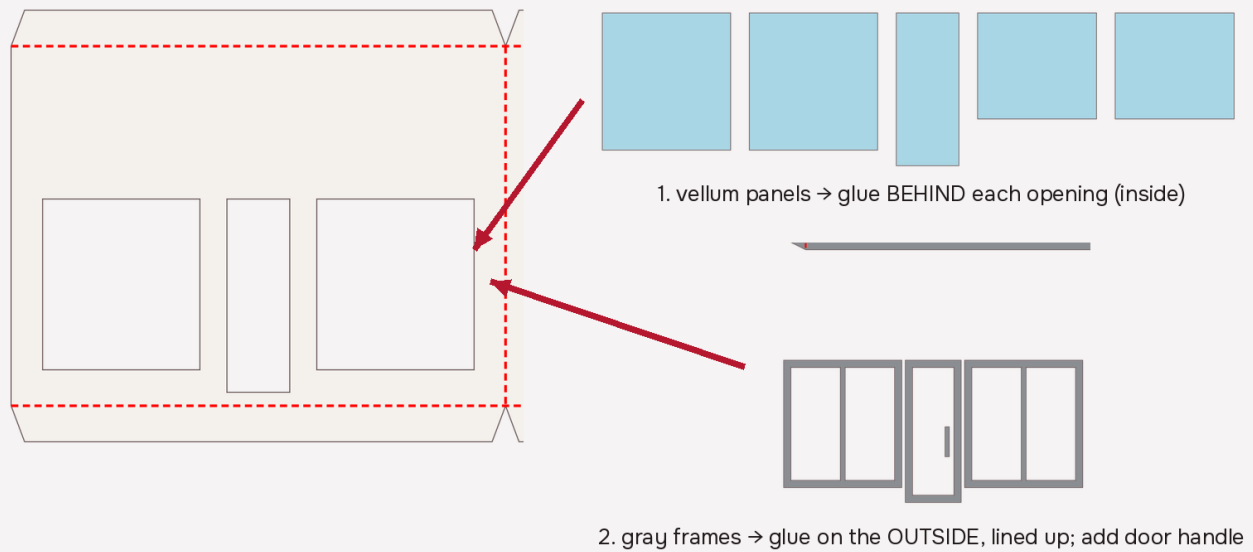

Step 1 · Score & fold the walls

Red dashed lines = score lines. Valley-fold every one, tabs toward the inside.

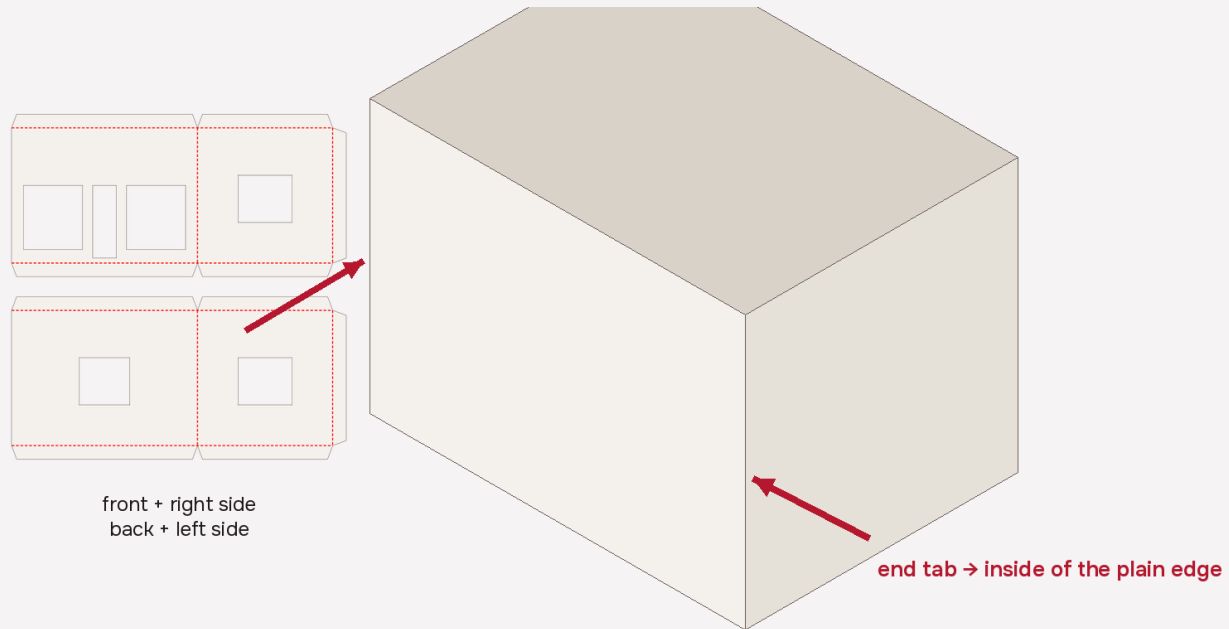

Start with both white wall pieces. Valley-fold every red score line; tabs always fold to the inside.

Step 2 · Windows & door

Glue a vellum panel behind each window and the door (inside face). Glue the gray frames on the outside, lined up with the openings, then add the door handle.

Step 3 · Join the walls

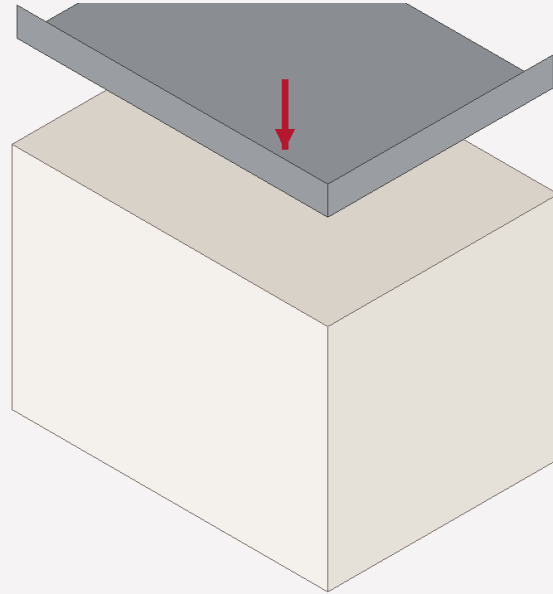

Glue each piece's end tab to the inside of the other piece's plain edge → a 5.5 × 4 in box.

Glue the end tab of the front + right-side piece to the inside of the plain edge of the back + left-side piece, then close the second corner the same way: a 5.5 × 4 in box.

Step 4 · Roof & parapet

1. fold parapet flaps UP, glue corner tabs inside

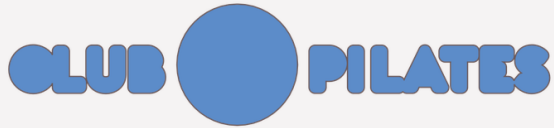

2. fold wall top tabs inward, drop roof in – it rests on the tabs
0.5 in parapet stands above the walls

Fold the roof parapet flaps up and glue their corner tabs inside. Fold the walls' top tabs inward, then drop the roof in; it rests on the tabs and the 0.5 in parapet stands above the walls.

Step 5 · Layer the sign

1. charcoal board

2. blue halo

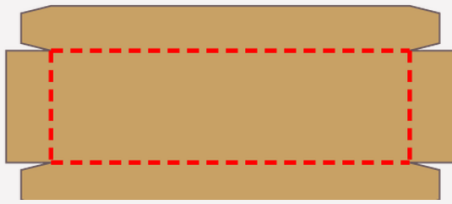

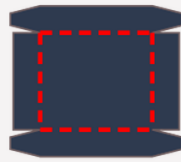

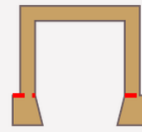

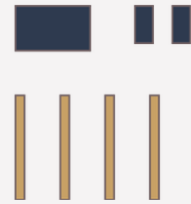

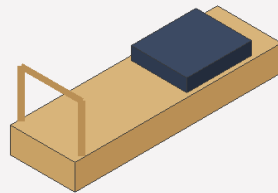

3. white logo

finished sign 5.4 × 1.4 in
glue across the top of the front wall

Glue the blue halo centered on the charcoal board. Then, with tweezers, glue each white letter, the white ring and the lotus inside its blue outline. Glue the 5.4 × 1.4 in sign across the top of the front wall.

Step 6 · Mini reformers

tan box = frame (fold, glue upside-down)
 navy box = carriage, near the head end
 footbar feet fold & glue at the far end
 add headrest, shoulder rests, strap strips

make 3

For each of the 3 reformers: fold the tan box and glue it upside-down as the frame, glue the navy carriage box near one end, fold the footbar feet and glue at the other end, then add headrest, shoulder rests and strap strips.

Step 7 · Base & finishing

sidewalk along the front edge, pavers beside it
glue the building on via its bottom tabs

Scatter the mats & balls – done!

Glue the light-gray sidewalk along the front edge of the green base with the pavers beside it. Glue the building down by its bottom tabs, place the reformers, and scatter the mats and balls. (Optional: the blue awning with white stripes glues under the sign; real studios usually have none.)

Tips & troubleshooting

Logo letters tear or don't release

Strokes are about 0.06 in at their thinnest. Use a fresh fine-point blade, Intricate Cut, smooth white 65 lb (or very smooth 80 lb) cardstock, and peel the mat away from the paper, not the paper off the mat. Still tearing? Scale the sign group to 110% on all three sign sheets (it will overhang the wall slightly).

Score lines in the wrong place

The SCORE layer wasn't attached. Select score + cut layer, Attach, and re-send.

Pieces imported at the wrong size

Delete old uploads, re-upload from the v3 kit, then lock proportions and type the width from Cricut-Import-Steps.txt.

Cardstock weight

65 lb folds crisply and cuts fine detail best; 80 lb gives stiffer walls. A good mix: 80 lb for walls, roof and base; 65 lb for the logo, reformers and frames.

Glue warping the walls

Use thin lines of tacky glue or a glue pen, and hold tabs a few seconds. Let the wall box dry before adding the roof.

Dots and ® from the logo

Left off on purpose (too small to cut cleanly). The medallion ring is thickened to 0.065 in.
